HOW A PLANT IS GROWN IS OF CRITICAL IMPORTANCE

The nutrient content as well as its phytochemical properties can vary dramatically, depending on its growing and har-

vesting methods. We have found many plants are too poorly grown, too toxic or both and do not offer the full spectrum of benefits typically cited in the scientific literature that we are looking for. Therefore, how a plant is grown is of critical importance.

Premier Greens is a live source, organic, gluten free, vegan friendly superfood. It’s the most powerful gluten free plant formula we have ever created. Our greens are not fumigated, irradiated, solvent extracted, or heat damaged. PRL’s quality guarantee ensures Premier Greens meets FDA requirements for identity, purity, strength, composition while testing for contaminants such as pesticides, non-organic materials, and heavy metals including arsenic, mercury, cadmium and lead.

The foundation of great health requires good mineral nutrition. Take action and transform yourself to live your life to the fullest! Support your diet everyday with Premier Greens to achieve your optimal health and vitality.
